

Notes on Creating Proofs of

#6514 Major Revision to SEMI A1 and #6478 LI Revision to SEMIA2

Sep. 15, 2019

Japan TC Chapter of Automation Technology GTC

1. The types of lines of the tables

Upon potential line width corrections of the tables, please be careful not to change the type of lines (solid line, dotted line, one-dot chain line, etc.) since they have technical meanings.

- Since a copy of the master Word file that is used for the publication of the previous ballot is not always provided in time for the next revision ballot development, please refer the denoted portions, which are the targets of the revision ballot, of Word file submitted to SEMI Staff.
- Since #6514 is the Major Revision to SEMI A1 and completely rewritten with the limited denotes on remarkable changes only (as noted in the ballot), the Word file of #6514 should replace the existing master Word file and should be used as the base of the new master Word file.
- Please do not refer PDF files but directly refer the original Word files submitted to SEMI Staff, as PDF files frequently have problems on the expression of those lines.

2. Using “the light green” on the table

Please leave the use of light green on the tables in #6514 as it is.

Note: Japan TC Chapter of Automation Technology GTC is going to raise a request to revise Style Manual, Page 12, Table 3 Table Formatting Rules, #3-1 *Tables*, (7) as follows, since light green is already used in published Standards.

- In the document that adopts emphasizing of requirements by placing a border around it, use of light green shading is not allowed, unless the table contains Requirements (see Table 1, #1-8 Paragraphs that Contain Requirements, (2) (3)).

3. The positions of putting the notes

To distinguish whether a superscript note specifies the word or the entire sentence as the example below, please follow the *Oxford Style Manual format* instead of *The Chicago Manual of Style*.

- The end of the handoff shall be checked with the sensor XYZ^{#1}. ←Word XYZ
- The end of the handoff shall be checked with the sensor XYZ.^{#1} ←Entire sentence

End of the document
