

Feedback to Korea HB-LED

Doc 5986, New Standard: GUIDE FOR TRIMETHYLALUMINUM FOR HB-LED MANUFACTURING

- Concern as to the content related to SEMI C66, Guide for Trimethylaluminium (TMAI), 99.5% Quality, is very similar
- Review SEMI C66
 - Recommend to use SEMI C66 as a template for the other documents

Doc 5988 is the incorrect ballot.

Doc 5985: Change “Guideline” to “Guide”

For all Documents (5984, 5985, 5986, 5987, 5988)

- It is recommended to send these documents to the intercommittee committees prior to balloting (Liquid Chemicals, Compound, Gases)
 - Contact: Hugh from PV and Liquid Chemicals (Will ask Kevin to refer to Natalie)
- Will need to further search on the materials already published (Doc 5986)
- Do the values in the table make sense? Are they existing in other documents?
- On the purity values, are there sufficient stakeholder input?
