

SEMI Fall Standards Meeting 2019

Filters and Purifiers TF Meeting Summary

Date: Nov 04, 2019, 10am-11am

TF Co-Chairs: Joyce Chen and M. Saleem

Summary:

- 6290C (New Standard, Test Method for Hydrocarbon Contamination), 6291C (New Standard, Test Method for Metallic Impurities), 6441 (New Standard, Subordinate to SEM 70), 6457 (F38 rewrite), 6477 (F112 Re-write) all balloted in Cycle 7 (2019) and received no rejects.
 - 6290C and 6291C received comments from Supika Mashiro, regarding Section 12 (Safety Precautions) that since these are not safety documents, the use of mandatory language is not allowed. The TF reviewed and agreed with Supika. However, we will proceed with the document as is and make the change in Section 12 from “Shall” to “Should” in a future line item ballot.
 - 6441 was super clean. Will be sent to A&R after procedural review.
 - 6457 received an editorial comment from Rafael Vargas, that font of variables in formulas should be changed to normal from italics. TF found this comment non-persuasive as the task of doing this in formulas is cumbersome.
 - 6477 was super clean. Will be sent to A&R after procedural review.
- TF will work with Metallic Materials for Gas Delivery TF on re-writing SEMI E49.6 and E49.8.
- Next meeting: Spring Standards 2020 meeting, March 30, 10-11am.
