Negative 1 of Reject 1

Negative	Referenced Section		
	Reason	<p>Geometry</p> <p>Placement of the LMD is unknown. There is a 50cm or 3H measured distance in Section 6.1.3.3. How to place the LMD? I think that there is no need to use an Integrating sphere. I think good to measure in spectrophotometer in the dark room or bright room.</p>

		Reason	<p>The 50cm or 3H which are described in section 6.1.3.3 is the distance between LMD and display. Because the details are explained in IDMS and IEC 62341-6-2 in section 4, I just set the distance.</p> <p>As you mentioned, most of measurement condition with spectrophotometer is in the dark room. Since it is difficult to set the uniform ambient room condition, an intergrating sphere is mainly use for that.</p>

Also, the contrast ratio is very sensitive with black luminance.</p> <p>There is 500 white luminance, if the black is 0.001, the contrast ratio is 500,000:1, and if the black is 0.0001, the result is 5,000,000:1</p> <p>So, I would like to set the perceptual contrast concept, instead of physical contrast.</p>
